SOLUTION

The main problem faced by the students are they cannot be able to get the preferred course or college.

The main reasons are the competition among the students is too high and the technologies are growing high.

The students should apply for all the eligibility criteria college because if one college got filled it move to next preferred college so that we can get the next best college.

The students do not know the full information of the college or course and what was the fees' structure, how was the academics and what are

We can do the search about the college and the entire details well before joining that particular college.

Before joining that college, we first collect all the details of that college and realize and adapt accordingly how the college environment

The other problem we faced was sometimes if our enrolment is not strong or truth the enrolment will drop, and it does not move to further step like application and verification.

The only way we should be strong with our profile details because it speaks a lot what we are further going to do in future.

The best solution for this problem is we shouldn't lie in our marks and profile details if we entered the exact details the university will automatically check and allocate the seats
